Disaster Hits Home-Mary C. Comerio 1998
Using case studies of six recent urban disasters, including hurricanes and earthquakes, an expert on postdisaster reconstruction discusses the basic ingredients that mark contemporary
disasters, showing how the usual response is insufficient and offering worthwhile solutions.

results fill our television screens and newspapers. Mary C. Comerio is interested in what happens in the weeks and months after such disasters, particularly in the recovery of damaged housing. Through case studies of six recent urban disasters—Hurricane Hugo in South Carolina, Hurricane Andrew in Florida, the Loma Prieta and Northridge earthquakes in California, as well as earthquakes in Mexico City and Kobe, Japan—Comerio demonstrates that several fundamental factors have changed in contemporary urban disasters. The foremost change is in scale, and as more Americans move to the two coasts, future losses will continue to be formidable because of increased development in these high-hazard areas. Moreover, the visibility of disasters in the news media will assure that response efforts remain highly politicized. And finally, the federal government is now expected to be on the scene with personnel, programs, and financial assistance even as private insurance companies are withdrawing disaster coverage from homeowners in earthquake- and hurricane-prone regions.

Demonstrating ways that existing recovery systems are inadequate, Comerio proposes a rethinking of what recovery means, a comprehensive revision of the government's role, and more equitable programs for construction financing. She offers new criteria for a housing recovery policy as well as real financial incentives for preparedness, for limiting damage before disasters occur, and for providing a climate where private insurance can work. Her careful analysis makes this book important reading for policymakers, property owners, and anyone involved in disaster mitigation.

Coming Home after Disaster—Alka Sapat
2016-12-19 Post-disaster housing concerns and dilemmas are complex, global in nature, and are inextricably intertwined with social, economic, and political considerations. The multi-faceted nature of housing recovery requires a holistic approach that accounts for its numerous dimensions and contours that are best captured with multi-disciplinary, multi-scalar, and multi-
hazard approaches. This book serves as a valuable resource by highlighting the key issues and challenges that need to be addressed with regard to post-disaster housing. By featuring a collection of case studies on various disasters that have occurred globally and written by scholars and practitioners from various disciplines, it highlights the rich diversity of approaches taken to solve post-disaster housing problems. Coming home after Disaster can serve as an essential reference for researchers and practitioners in disaster and emergency management, public administration, public policy, urban planning, sociology, anthropology, geography, economics, architecture, and other related social science fields. Key features in this book are: Addresses a wide range of dilemmas such as differential levels of social and physical vulnerability; problems related to land tenure, home-ownership, property rights, planning, and zoning; and political and legal challenges to housing recovery. Discusses the role played by public, private and non-governmental organizations, the informal sector, financial institutions, and insurance in rebuilding and housing recovery. Features global case studies, incorporates relevant examples and policies, and offers solutions from a range of scholars working in multiple disciplines and different countries.

Asian Law in Disasters-Yuka KANEKO 2016-05-20 This book is a critical analysis of several of the most disaster-prone regions in Asia. Its unique focus is on the legal issues in the phase of disaster recovery, the most lengthy and difficult stage of disaster response that follows the conclusion of initial emergency stage of humanitarian aid. In the stage of disaster recovery, the law decides the fate of reconstruction for the individual houses and livelihoods of the disaster-affected people and sets the limit of governmental support for them during the lengthy period of suspension of normal living until full recovery is obtained. Researchers who were participant-observers in the difficult recovery phase after the mega-disasters in Asia analyse the reality of the
functions of law which often hinder, rather than foster, efforts to restore disaster victims’ lives. The book collects research conducted with an emphasis on empirical approaches to legal sociology, including direct interviews with people affected by the disaster. It offers a holistic approach beyond the traditional sectionalism of legal studies by starting with a historical review and incorporating both spheres of public law and private law, in order to obtain a new perspective that can concurrently achieve disaster risk reductions and human-centered recoveries. With particular emphasis on the unexplored area of law in the post-disaster recovery phase, this book will attract the attention of students and scholars of disaster studies, legal studies, Asian studies, as well as those who work in the practice of disaster management.

Housing Recovery after Disasters-Frances L. Edwards 2019-08-15 This book contains housing policy scholars and practitioners examining the existing theories of community long term recovery, and the central role of housing in resilience. They propose public policy changes that are needed to improve recovery from future devastating community-level disasters.

Housing Policy Innovation in the Global South-Paavo Monkkonen 2020-06-30 Housing problems have become increasingly complex in the Global South. An increased pressure to upgrade older stock, to provide adequate infrastructure, and bring city amenities to urban peripheries compounds the continued need for new housing of a decent standard. This comprehensive volume spans nine countries, simultaneously analyzing innovative housing...
policies and questioning the idea of innovation in this arena. The authors describe three persistent, global challenges to contemporary policy: the inherent difficulty in mass-producing housing of decent quality with access to the city; the challenge of community-based upgrading programmes, which often fail to benefit those who are worst off; and the political root of housing policies, which don’t always consider the diverse needs of populations at the expense of the least powerful. This volume raises questions about what many consider the two most successful areas of housing policy in the Global South: the community-based land sharing programmes for redevelopment in South-East Asia and the finance-driven social housing programmes in Latin America. The authors examine mass housing production programmes, incremental development processes, community-based urban upgrading, the legal structure of condominiums, and land-sharing policies, while also highlighting challenges to policy learning across contexts. This book will be of great interest to students, researchers and those involved with contemporary housing policies, particularly in the Global South. It was originally published as a special issue of the International Journal of Housing Policy.

**Rebuilding Urban Places After Disaster**-Eugenie Birch 2006
Disasters—natural ones, such as hurricanes, floods, or earthquakes, and unnatural ones such as terrorist attacks—are part of the American experience in the twenty-first century. The challenges of preparing for these events, withstanding their impact, and rebuilding communities afterward require strategic responses from different levels of government in partnership with the private sector and in accordance with the public will. Disasters have a disproportionate effect on urban places. Dense by definition, cities and their
environ suffers great damage to their complex, interdependent social, environmental, and economic systems. Social and medical services collapse. Long-standing problems in educational access and quality become especially acute. Local economies cease to function. Cultural resources disappear. The plight of New Orleans and several smaller Gulf Coast cities exemplifies this phenomenon. This volume examines the rebuilding of cities and their environs after a disaster and focuses on four major issues: making cities less vulnerable to disaster, reestablishing economic viability, responding to the permanent needs of the displaced, and recreating a sense of place. Success in these areas requires that priorities be set cooperatively, and this goal poses significant challenges for rebuilding efforts in a democratic, market-based society. Who sets priorities and how? Can participatory decision-making be organized under conditions requiring focused, strategic choices? How do issues of race and class intersect with these priorities? Should the purpose of rebuilding be restoration or reformation? Contributors address these and other questions related to environmental conditions, economic imperatives, social welfare concerns, and issues of planning and design in light of the lessons to be drawn from Hurricane Katrina.

**Displaced by Disaster** - Ann-Margaret Esnard

2014-05-23 Displacement has traditionally been conceptualized as a phenomenon that results from conflict or other disruptions in developing or unstable countries. Hurricane Katrina shattered this notion and highlighted the various dilemmas of population displacement in the United States. The dilemmas stem from that of inconsistent terminology and definitions; lack of efforts to quantify displacement risk potential and that factor displacement vulnerability into community plans; lack of understanding of differential needs of “displacees” especially during long-term recovery periods; and policy and institutional responses (or lack thereof) especially as it relates to post-disaster sheltering.
and housing. Incorporating relevant examples, cases, and policies Esnard and Sapat look at the experience of other countries and how the international community has dealt with hundreds of thousands of individuals who have been forced to leave their homes. Displaced by Disaster addresses such issues from a planning and policy perspective informed by scholarship in disciplines such as emergency management; political science; sociology and anthropology. It is ideal for students and practitioners working in the areas of disaster management, planning, public administration and policy, housing, and the many disciplines connected to disaster issues.

**Disaster and Development**-Naim Kapucu
2014-04-11 This book offers a systematic, empirical examination of the concepts of disasters and sustainable economic development applied to many cases around the world. It presents comprehensive coverage of the complex and dynamic relationship between disaster and development, making a vital contribution to the literature on disaster management, disaster resilience and sustainable development. The book collects twenty-three chapters, examining theoretical issues and investigating practical cases on policy, governance, and lessons learned in dealing with different types of disasters (e.g., earthquakes, floods and hurricanes) in twenty countries and communities around the world.

**Disasters and the Law**-Daniel A. Farber
2006-01-01 Recent hurricanes and other natural disasters demonstrate serious gaps in the legal system and its ability to respond to events of such magnitude. Disasters and the Law: Katrina and Beyond studies disaster response, prevention, and mitigation strategies by integrating knowledge and experience from urban planning, bankruptcy law, and wetlands law.

**On Risk and Disaster**-Ronald J. Daniels
2011-06-07 Named one of Planetizen's Top 10 Books of 2006
Hurricane Katrina not only devastated a large area of the nation's Gulf coast, it also raised fundamental questions about ways the nation can, and should, deal with the inevitable problems of economic risk and social responsibility. This volume gathers leading experts to examine lessons that Hurricane Katrina teaches us about better assessing, perceiving, and managing risks from future disasters. In the years ahead we will inevitably face more problems like those caused by Katrina, from fire, earthquake, or even a flu pandemic. America remains in the cross hairs of terrorists, while policy makers continue to grapple with important environmental and health risks. Each of these scenarios might, in itself, be relatively unlikely to occur. But it is statistically certain that we will confront such catastrophes, or perhaps one we have never imagined, and the nation and its citizenry must be prepared to act. That is the fundamental lesson of Katrina. The 20 contributors to this volume address questions of public and private roles in assessing, managing, and dealing with risk in American society and suggest strategies for moving ahead in rebuilding the Gulf coast. Contributors: Matthew Adler, Vicki Bier, Baruch Fischhoff, Kenneth R. Foster, Robert Giegengack, Peter Gosselin, Scott E. Harrington, Carolyn Kousky, Robert Meyer, Harvey G. Ryland, Brian L. Strom, Kathleen Tierney, Michael J. Trebilcock, Detlof von Winterfeldt, Jonathan Walters, Richard J. Zeckhauser.

Rebuilding Asia Following Natural Disasters-Patrick Daly 2016-03-29 Provides a detailed and comparative assessment of the humanitarian responses to major disasters in Asia over the past two decades.

Race, Place, and Environmental Justice After Hurricane Katrina-Robert D. Bullard 2018-04-17 On August 29, 2005, Hurricane Katrina made landfall near New Orleans leaving death and destruction across the Louisiana,
Mississippi, and Alabama Gulf Coast counties. The lethargic and inept emergency response that followed exposed institutional flaws, poor planning, and false assumptions that are built into the emergency response and homeland security plans and programs. Questions linger: What went wrong? Can it happen again? Is our government equipped to plan for, mitigate, respond to, and recover from natural and manmade disasters? Can the public trust government response to be fair? Does race matter? Racial disparities exist in disaster response, cleanup, rebuilding, reconstruction, and recovery. Race plays out in natural disaster survivors' ability to rebuild, replace infrastructure, obtain loans, and locate temporary and permanent housing. Generally, low-income and people of color disaster victims spend more time in temporary housing, shelters, trailers, mobile homes, and hotels - and are more vulnerable to permanent displacement. Some 'temporary' homes have not proved to be that temporary. In exploring the geography of vulnerability, this book asks why some communities get left behind economically, spatially, and physically before and after disasters strike.

**Living with Hazards, Dealing with Disasters**
William L. Waugh 1999-12-30

This is the first concise introduction to emergency management, the emerging profession that deals with disasters from floods and earthquakes to terrorist attacks. Coverage includes:
- The history of emergency management and its evolution from volunteer effort to trained intervention;
- Organization of emergency management systems -- local, state, regional, national, international; governmental, for-profit, and nonprofit;
- Managing natural disasters -- floods, earthquakes, hurricanes, wildfires, tornados, avalanches, etc.;
- Managing manmade disasters -- civil defense, terrorism, hazardous materials accidents, fires, structural failures, nuclear accidents, transportation disasters;
- Policy issues in the management of risk, emergencies, and disasters;
- Disaster management in the Twenty-first Century--
technological and political challenges. Twenty case studies illustrate the handling of actual disasters including the Northridge Earthquake and the Oklahoma City Bombing. Discussion questions and guides to on-line information sources facilitate use of the book in the classroom and professional training programs.

There is No Such Thing as a Natural Disaster - Gregory Squires 2013-01-11 There is No Such Thing as a Natural Disaster is the first comprehensive critical book on the catastrophic impact of Hurricane Katrina on New Orleans. The disaster will go down on record as one of the worst in American history, not least because of the government’s inept and cavalier response. But it is also a huge story for other reasons; the impact of the hurricane was uneven, and race and class were deeply implicated in the unevenness. Hartman and Squires assemble two dozen critical scholars and activists who present a multifaceted portrait of the social implications of the disaster. The book covers the response to the disaster and the roles that race and class played, its impact on housing and redevelopment, the historical context of urban disasters in America and the future of economic development in the region. It offers strategic guidance for key actors - government agencies, financial institutions, neighbourhood organizations - in efforts to rebuild shattered communities.

Rebuilding After Disasters - Gonzalo Lizarralde 2009-09-10 Disasters are not natural. Natural events such as earthquakes, floods, hurricanes, etc. become disasters because of the fragile relations that exist between the natural, human and built environments. Sadly, major disasters will always occur in towns and cities in the developing world where resources are limited, people are vulnerable and needs are particularly great. The prevailing state of emergency challenges thoughtful and sustainable planning and construction. Yet it is possible, in theory and in practice, to construct them in a way that provides a sustainable environment and...
improved conditions for current and future generations. Rebuilding After Disasters emphasizes the role of the built environment in the re-establishment of lives and sustainable livelihoods after disasters. Expert contributors explain the principal challenges facing professionals and practitioners in the building industry. This book will be of great value to decision makers, students and researchers in the fields of architecture, social sciences, engineering, planning, geography, and disaster recovery.

Living with Hazards, Dealing with Disasters: An Introduction to Emergency Management- William L Waugh 2015-06-03 This is the first concise introduction to emergency management, the emerging profession that deals with disasters from floods and earthquakes to terrorist attacks. Twenty case studies illustrate the handling of actual disasters including the Northridge Earthquake and the Oklahoma City Bombing. Discussion questions and guides to on-line information sources facilitate use of the book in the classroom and professional training programs.

Disaster Studies-Janki Andharia 2020-03-25 This book covers several dimensions of disaster studies as an emerging discipline. It is the inaugural book in the series ‘Disaster Studies and Management’ and deals with questions such as “Is disaster management a field of practice, a profession, or simply a new area of study?” Exploring intersectionalities, the book also examines areas of research that could help enhance the discourse on disaster management from policy and practice perspectives, revisiting conventional event-centric approaches, which are the basis for most writings on the subject. Several case studies and comparative analyses reflect a critical reading of research and practice concerning disasters and their management. The book offers valuable insights into various subjects including the challenge of establishing inter- and multi-disciplinary teams within the
academia involved in disaster studies, and sociological and anthropological readings of post-disaster memoryscapes. Each of the contributors has an enduring interest in disaster studies, thus enriching the book immensely. This book will be of interest to all the students and scholars of disaster studies and disaster management, as well as to practitioners and policymakers.

**Resettlement Challenges for Displaced Populations and Refugees** - Ali Asgary
2018-08-16 The main focus of this book is to help better understand the multidimensionality and complexity of population displacement and the role that reconstruction and recovery knowledge and practice play in this regard. According to the UN Refugee Agency (UNHCR), the total number of people forcibly displaced due to wars and conflicts, disasters, and climate change worldwide, exceeded 66 million in 2016. Many of these displaced populations may never be able to go back and rebuild their houses, communities, and businesses. This text brings together recovery and reconstruction professionals, researchers, and policy makers to examine how displaced populations can rebuild their lives in new locations and recover from disasters that have impacted their livelihoods, and communities. This book provides readers with an understanding of how disaster recovery and reconstruction knowledge and practice can contribute to the recovery and reconstruction of displaced and refugee populations. This book will appeal to students, researchers, and professionals working in the field.

**Facing Hazards and Disasters** - National Research Council
2006-09-10 Social science research conducted since the late 1970s has contributed greatly to society's ability to mitigate and adapt to natural, technological, and willful disasters. However, as evidenced by Hurricane Katrina, the Indian Ocean tsunami, the September 11, 2001 terrorist attacks on the United States, and other recent events, hazards and disaster research and its application could
be improved greatly. In particular, more studies should be pursued that compare how the characteristics of different types of events—including predictability, forewarning, magnitude, and duration of impact—affect societal vulnerability and response. This book includes more than thirty recommendations for the hazards and disaster community.

**Handbook of Critical Incident Analysis** - Richard W Schwester 2014-12-18
Critical incidents all too often explode onto the social conscious and challenge our sense of security. This comprehensive handbook brings together a range of experts who provide a foundation for the field of critical incident analysis by examining specific incidents—9/11, the Virginia Tech massacre, the H1N1 pandemic, the BP oil spill, and more—through various methodological and disciplinary lenses.

**Disaster Recovery** - Immanuel Kant 2015-10-16

Since the publication of the first edition of Disaster Recovery, a number of important new studies and guides have become available. Now revised, updated, and expanded, this second edition meets the high standards for providing evidence-based best practices in a user-friendly textbook set by its predecessor. It is also more international in scope.

**Encyclopedia of Disaster Relief** - K. Bradley Penuel 2010-12-29
Request a FREE 30-day online trial to this title at www.sagepub.com/freetrial!
This encyclopedia covers response to disasters around the world, from governments to NGOs, from charities to politics, from refugees to health, and from economics to international relations, covering issues in both historical and contemporary context. The volumes include information relevant to students of sociology, national security, economics, health sciences, political science, emergency preparedness, history, agriculture, and many other subjects. The goal is to help readers appreciate the
importance of the effects, responsibilities, and ethics of disaster relief, and to initiate educational discussion brought forth by the specific cultural, scientific, and topical articles contained within the work. Including 425 signed entries in a two-volume set presented in A-to-Z format, and drawing contributors from varied academic disciplines, this encyclopedia also features a preface by Thomas H. Kean and Lee H. Hamilton of the 9/11 Commission. This reference resource examines disaster response and relief in a manner that is authoritative yet accessible, jargon-free, and balanced to help readers better understand issues from varied perspectives. Key Themes - Geography - Government and International Agencies - History - Human-induced Disasters - Infrastructure - Local Response - Major Disasters (Relief Case Studies) - Medicine and Psychology - Methods and Practices - Mitigation - Natural Disasters (Overviews) - Politics and Funding - Preparedness - Recovery - Response - Science and Prediction - Sociology - U.S. Geographical Response

Global Climate Change, Population Displacement, and Public Health - Lawrence A. Palinkas 2020-05-07 This timely text examines the causes and consequences of population displacement related to climate change in the recent past, the present, and the near future. First and foremost, this book includes an examination of patterns of population displacement that have occurred or are currently underway. Second, the book introduces a three-tier framework for both understanding and responding to the public health impacts of climate-related population displacement. It illustrates the interrelations between impacts on the larger physical and social environment that precipitates and results from population displacement and the social and health impacts of climate-related migration. Third, the book contains first-hand accounts of climate-related population displacement and its consequences, in addition to reviews of demographic data and reviews of existing literature on the subject. Topics explored among the chapters include:
Hurricane Katrina and New Orleans Hurricane Maria and Puerto Rico The California Wildfires Fleeing Drought: The Great Migration to Europe Fleeing Flooding: Asia and the Pacific Fleeing Coastal Erosion: Kivalina and Isle de Jean Charles Although the book is largely written from the perspective of a researcher, it reflects the perspectives of practitioners and policymakers on the need for developing policies, programs, and interventions to address the growing numbers of individuals, families, and communities that have been displaced as a result of short- and long-term environmental disasters. Global Climate Change, Population Displacement, and Public Health is a vital resource for an international audience of researchers, practitioners, and policymakers representing a variety of disciplines, including public health, public policy, social work, urban development, climate and environmental science, engineering, and medicine.

**The Politics of Disaster**-Marvin Olasky

2006-07-29 Why was the government not capable of responding to human need in the aftermath of Hurricane Katrina? How will the "Katrina failure" impact the next presidential election? And just what should we expect--and not expect--from the government in times of crisis? "Big government didn't work," says veteran journalist and political analyst Marvin Olasky. "And it is clear that a new paradigm for responding to national crisis has emerged. Private and faith-based organizations have stepped in and politics will never be the same."

**Recovery from Disaster**-Ian Davis 2015-08-20 Disasters can dominate newspaper headlines and fill our TV screens with relief appeals, but the complex long-term challenge of recovery—providing shelter, rebuilding safe dwellings, restoring livelihoods and shattered lives—generally fails to attract the attention of the public and most agencies. On average 650 disasters occur each year. They affect more than 200 million people and cause $166 trillion of...
damage. Climate change, population growth and urbanisation are likely to intensify further the impact of natural disasters and add to reconstruction needs. Recovery from Disaster explores the field and provides a concise, comprehensive source of knowledge for academics, planners, architects, engineers, construction managers, relief and development officials and reconstruction planners involved with all sectors of recovery, including shelter and rebuilding. With almost 80 years of first-hand experience of disaster recovery between them, Ian Davis (an architect) and David Alexander (a geographer) draw substantially from first-hand experiences in a variety of recovery situations in China, Haiti, Italy, Japan, New Zealand, Pakistan, the Philippines and the USA. The volume is further enriched by two important and unique features: 21 models of disaster recovery are presented, seven of which were specifically developed for the book. The second feature is a survey of expert opinion about the nature of effective disaster recovery—the first of its kind. More than 50 responses are provided in full, along with an analysis that integrates them with the theories that underpin them. By providing a framework and models for future study and applications, Davis and Alexander seek both to advance the field and to provide a much-needed reference work for decision makers. With a broad perspective derived from the authors' roles held as university professors, researchers, trainers, consultants, NGO directors and advisors to governments and UN agencies, this comprehensive guide will be invaluable for practitioners and students of disaster management.

Innovative Community Responses to Disaster-Brent D. Hales 2017-10-02
Increasingly, community leaders around the world face major natural and economic disasters that require them to find ways to rebuild both physical infrastructure and the local economy. Doing this effectively requires an understanding of how various parts of the community are interconnected, as well as information as to
which revitalization approaches have succeeded in the past. Community investment in recovery is essential and, in some cases, may require local leaders to rethink how it can be financed and arranged. This book presents a conceptual framework based on the community capitals, and describes approaches that have succeeded in situations where local leaders have coordinated efforts to rebuild and revitalize local conditions. Contributions provide examples of successful approaches around the world, thus analysing potential strategies for addressing disasters of many different types in various cultural settings. In this way, the book provides insights into a variety of approaches based on applications of accepted community development theory and concepts. This book was originally published as a special issue of Community Development.

**Long-Term Community Recovery from Natural Disasters**-Lucy A. Arendt 2014-11-21
Today, governmental efforts at long-term community recovery from a natural disaster consist primarily of rebuilding the physical artifact of the community. This entails reestablishing vital community services and infrastructure and creating housing to replace that which has been lost. While restoring the built environment of a disaster area is esse

**Disaster Resiliency**-Naim Kapucu 2013-05-02
Natural disasters in recent years have brought the study of disaster resiliency to the forefront. The importance of community preparedness and sustainability has been underscored by such calamities as Hurricane Katrina in 2005 and the Japanese tsunami in 2011. Natural disasters will inevitably continue to occur, but by understanding the concept of resiliency as well as the factors that lead to it, communities can minimize their vulnerabilities and increase their resilience. In this volume, editors Naim Kapucu, Christopher V. Hawkins, and Fernando I. Rivera gather an impressive array of scholars to provide a much needed re-think to the topic disaster resiliency. Previous research on the subject has
mainly focused on case studies, but this book offers a more systematic and empirical assessment of resiliency, while at the same time delving into new areas of exploration, including vulnerabilities of mobile home parks, the importance of asset mapping, and the differences between rural and urban locations. Employing a variety of statistical techniques and applying these to disasters in the United States and worldwide, this book examines resiliency through comparative methods which examine public management and policy, community planning and development, and, on the individual level, the ways in which culture, socio-economic status, and social networks contribute to resiliency. The analyses drawn will lead to the development of strategies for community preparation, response, and recovery to natural disasters. Combining the concept of resiliency, the factors that most account for the resiliency of communities, and the various policies and government operations that can be developed to increase the sustainability of communities in face of disasters, the editors and contributors have assembled an essential resource to scholars in emergency planning, management, and policy, as well as upper-level students studying disaster management and policy.

Mennonite Disaster Service-Brenda Phillips, Ph.D 2013-11-05 This ethnography describes and explains how Mennonite Disaster Service, following a well-established tradition of helping their neighbors, organized volunteer efforts for the 2005 and 2008 Gulf Coast storms.

Disasters, Accidents, and Crises in American History-Ballard C. Campbell 2008 Presents a chronologically-arranged reference to catastrophic events in American history,
including natural disasters, economic
depressions, riots, murders, and terrorist attacks.

**Acts of God**-Ted Steinberg 2006-07-20 As the
waters of the Mississippi River and Lake
Pontchartrain began to pour into New Orleans,
people began asking the big question--could any
of this have been avoided? How much of the
damage from Hurricane Katrina was bad luck,
and how much was poor city planning?
Steinberg's Acts of God is a provocative history
of natural disasters in the United States. This
revised edition features a new chapter analyzing
the failed response to Hurricane Katrina, a
disaster Steinberg warned could happen when
the book first was published. Focusing on
America's worst natural disasters, Steinberg
argues that it is wrong to see these tragedies as
random outbursts of nature's violence or
expressions of divine judgment. He reveals how
the decisions of business leaders and government
officials have paved the way for the greater
losses of life and property, especially among
those least able to withstand such blows--
America's poor, elderly, and minorities. Seeing
nature or God as the primary culprit, Steinberg
explains, has helped to hide the fact that some
Americans are simply better able to protect
themselves from the violence of nature than
others. In the face of revelations about how the
federal government mishandled the Katrina
calamity, this book is a must-read before further
wind and water sweep away more lives. Acts of
God is a call to action that needs desperately to
be heard.

**Disaster Relief**-Alan Marzilli 2007 Hurricane
Katrina brought to light many questions about
Americans' preparedness for handling large-scale
disasters: Is FEMA effective? Are the local, state,
and federal governments sufficiently
coordinated? Examining issues from various
perspectives, this work offers students the tools
to form their own opinions by bringing such
events into focus.
The Indian Economy Sixty Years after Independence-R. Jha 2008-11-04 Provides a detailed analysis of the achievements and disappointments of the modern Indian economy, and an exploration of the issues which are shaping India's economic future. Offers a comprehensive overview of the state of India's economy in the twenty-first century and is essential for postgraduates and scholars interested in this area.

The Routledge Handbook of Urban Disaster Resilience-Michael K Lindell 2019-07-30 The Routledge Handbook of Urban Disaster Resilience emphasizes the intersection of urban planning and hazard mitigation as critical for community resilience, considering the interaction of social, environmental, and physical systems with disasters. The Handbook introduces and discusses the phases of disaster - mitigation, preparedness/response, and recovery - as well as each of the federal, state, and local players that address these phases from a planning and policy perspective. Part I provides an overview of hazard vulnerability that begins with an explanation of what it means to be vulnerable to hazards, especially for socially vulnerable population segments. Part II discusses the politics of hazard mitigation; the failures of smart growth placed in hazardous areas; the wide range of land development policies and their associated risk; the connection between hazards and climate adaptation; and the role of structural and non-structural mitigation in planning for disasters. Part III covers emergency preparedness and response planning, the unmet needs people experience and community service planning; evacuation planning; and increasing community capacity and emergency response in developing countries. Part IV addresses recovery from and adaption to disasters, with topics such as the National Disaster Recovery Framework, long-term housing recovery; population displacement; business recovery; and designs in disasters. Finally, Part V demonstrates how disaster research is interpreted in practice - how
to incorporate mitigation into the comprehensive planning process; how states respond to recovery; how cities undertake recovery planning; and how to effectively engage the whole community in disaster planning. The Routledge Handbook of Urban Disaster Resilience offers the most authoritative and comprehensive coverage of cutting-edge research at the intersection of urban planning and disasters from a U.S. perspective. This book serves as an invaluable guide for undergraduate and postgraduate students, future professionals, and practitioners interested in urban planning, sustainability, development response planning, emergency planning, recovery planning, hazard mitigation planning, land use planning, housing and community development as well as urban sociology, sociology of the community, public administration, homeland security, climate change, and related fields.

**Business and Post-disaster Management**

C. Michael Hall 2016-01-29 This book provides a comprehensive examination of the effects of a natural disaster on businesses and organisations, and on a range of stakeholders, including employees and consumers. Research on how communities and businesses respond to disasters can inform policy and mitigate the cost and impacts of future disasters. This book discusses how places recover following a disaster and the vital roles that business and other organisations play. This volume gives a detailed understanding of business, organisational and consumer responses to the Christchurch earthquake sequence of 2010-2011, which caused 185 deaths, the loss of over 70 per cent of buildings in the city’s CBD, major infrastructure damage, and severely affected the city’s image. Despite the devastation, the businesses, organisations and people of Christchurch are now undergoing significant recovery. The book sheds significant new light not only on business and organisation response to disaster but on how business and urban systems may be made more resilient.
Reconstructing Kobe—David W. Edgington
2011-01-01 The Hanshin Earthquake was the largest disaster to affect postwar Japan and one of the most destructive postwar natural disasters to strike a developed country. Although the media focused on the disaster's immediate effects, the long-term reconstruction efforts have gone largely unexplored. Drawing on extensive fieldwork, David Edgington records the first ten years of reconstruction and recovery and asks whether planners successfully exploited opportunities to make a more sustainable and disaster-proof city. This book is an intricate investigation of one of the largest redevelopment projects in recent memory.
