Rafts, Boats and Ships From Prehistoric Times to the Medieval Era

The first major study of the history of watercraft, this book explores the development of rafts, boats, and ships from prehistoric times to the medieval era. It covers a wide range of topics, from the earliest-known watercraft to the development of more complex vessels, and includes discussions of the materials used in their construction, the techniques used in their making, and the ways in which they were used.

The book is divided into three parts. The first part covers the development of watercraft from prehistoric times to the medieval era. The second part looks at the different types of watercraft that were used in different parts of the world, and the third part examines the role of watercraft in the development of trade and commerce.

The book is illustrated with a large number of photographs and diagrams, and includes a glossary of terms used in the study of watercraft.

Rafts, Boats and Ships From Prehistoric Times to the Medieval Era

The book is available in both print and digital formats, and can be purchased from a variety of retailers.
