**Technology Meets Research - 60 Years Of Cern Technology: Selected Highlights** - Christian W Fabjan 2017-04-27 'The contributions from leading scientists of the day collected in this relatively slim book document CERN's 60-year voyage of innovation and discovery, the repercussions of which vindicate the vision of those who drove the foundation of the laboratory — European in constitution, but global in impact. The spirit of inclusive collaboration, which was a key element of the original vision for the laboratory, together with the aim of technical innovation and scientific excellence, are reflected in each of the articles in this unique volume. 'CERN Courier' 'Big' science and advanced technology are known to cross-fertilize. This book emphasizes the interplay between particle physics and technology at CERN that has led to breakthroughs in both
research and technology over the laboratory's first 60 years. The innovations, often the work of individuals or by small teams, are illustrated with highlights describing selected technologies from the domains of accelerators and detectors. The book also presents the framework and conditions prevailing at CERN that enabled spectacular advances in technology and contributed to propel the European organization into the league of leading research laboratories in the world. While the book is specifically aimed at providing information for the technically interested general public, more expert readers may also appreciate the broad variety of subjects presented. Ample references are given for those who wish to further explore a given topic.

As we approach the 21st century, the Advances in Computers serial remains the oldest continuously published anthology chronicling the evolution of the information technology field. Since 1960, this series has described the ever-changing nature of computing. In this volume, we will emphasize the major themes that have dominated computing in these latter days of the 1990s. Of course we mean the distributed nature of information technology. The growth of networking, the Internet and the World Wide Web have greatly changed the role of the computer, and in
turn, our lives as well. Starting as a computer science research topic in 1969, the ARPANET, funded by the U.S. government's Advanced Research Projects Agency (ARPA), tied together university, research, and military computing centers. By the mid-1980s the ARPANET evolved into the Internet under funding by the U.S. National Science Foundation (NSF). The computer experimenter, the so-called "computer geek," discovered the Internet and joined the fun. By the early 1990s, the World Wide Web (WWW) grew as a subnet of the Internet, and email and Web browsing became available to all. Today millions of "computer illiterate" individuals daily use these resources to send mail and search for online information. No longer is the Internet the domain of the serious computer researcher. In this volume we will describe some of the changes the Internet has brought us.
