Global Perspectives in Victimization-Paul C. Fridy 1993

The Psychology of Marxian Socialism-Henry de Man 2020-02-18 This classic work on the psychology of socialism carries for this edition a slightly refurbished title. By calling it The Psychology of Marxian Socialism, the work is sharply distinguished from an earlier work of the same title (written at a much earlier time by Gustave E. LeBon). This book was written in the post-Bolshevik revolutionary era, at the height of the Weimar democracy in Germany. LeBon's representatives a de filie de rfection, reflecting earlier chapters on the subject, and LeBon's work serves its strength from a close and hard look at how socialism operated in one country. It is probably one of the greatest efforts in the post-World War I period.

Mathe for Chemical Engineers-Hartanto Arthadarma 2007 Math for Chemical Engineers demonstrates the use of Mathcad 13, which is the latest version of one of the most popular and powerful computer programs in the world, for solving various chemical engineering problems. The book serves as a must-have guide and quick reference for chemical engineers and those who would like to learn and use Mathcad as their computational tool. This book can also be used as a textbook for chemical engineering education on computing using Mathcad. The book contains many real-life chemical engineering examples from various areas: material and energy balance, thermodynamics, transport phenomena, kinetics and reactor design, unit operations, engineering economics, and operations management. Unlike other books of similar theme, concise, but comprehensive, explanations are given in each chapter and step-by-step procedures of solving mathematical problems are also explained. This book is also helpful to experts on computer programming for engineering problems.

The book has chapters on Mathcad fundamentals, solving a single algebraic equation and a system of algebraic equations, curve fitting, integration and differentiation, solving a single differential equation, and solving a system of differential equations. The book also contains several case studies of Mathcad in Chemical Engineering. In that chapter, there are many exercises which are helpful in solving chemical engineering problems. Although Mathcad 13 is the software package chosen by the authors and used throughout the book, most of the features discussed can also be applied using earlier versions of Mathcad. Furthermore, although Mathcad will always evolve into a newer version, most of the contents in this book will be applicable for any subsequent version of Mathcad.

In the World Interior of Capital Peter Sloterdijk 2014-10-16 It displays the distinctive combination of narrations and philosophy for which he is well known, this book by Peter Sloterdijk develops a radically new account of globalization at the beginning of the twenty-first century. The author takes seriously the historical and philosophical consequences of the fact that the earth itself is a globe. Arriving at this thesis that is supported by a thorough examination of the scientific process that began with the first circumnavigation of the earth and that one can already discern elements of a new era beyond globalization. In the end phase of globalization, the world system completed its development and, as a capitalist system, came to determine all conditions of life. Sloterdijk takes the Crystal Palace in London, the site of the first world exhibition in 1851, as the most expressive metaphor for this situation. The palace demonstrates the inevitable exclusivity of globalization as the construction of a comfortable continent and an expansion of the world interior whose boundaries are invisible, yet virtually inseparable from without, and which is inhabited by one and a half billion winners of globalization; these three times this number are left standing outside the door.

Necropolitics, Racialization, and Global Capitalism Martina Gržinić 2014-06-04 This book articulates a contemporary, globalized world as one in which radical disparities in distribution of wealth are being reproduced as the bases for depoliticized social, institutional, and ideological discourses. At its core is a restatement of global capitalism from the management of life towards making a surplus value from death. This change is presented as a reorientation of biopolitics (bio meaning life)

Immunechemical Assays and Biosensor Technology for the 1990s-Robert M. Nakamura 1992 By combining biochemical molecular recognition schemes with suitable transducers to achieve signal, researchers have developed more rapid, accurate, and efficient tools for the presence or concentration of desired analytes in biological specimens. This volume summarizes the principles and applications of fundamental immunochemical assays, various assay formats, and the state of the art in ultra-sensitive and non-stoichiometric assays.

The New Gods - E. C. Covran 2013-02-32 Dibented "Sztachte without his hammer" by literary critic James Wood, the Romanian philosopher E. M. Covran is known as much for his profound pessimistic and apocalyptic as for the lyrical, raving prose with which he communicates them. Unlike many of his other works, such as On the Heights of Daqip and Tears and Saints, The New Gods echoes his usual apathetic approach in favor of more extensive and analytic essays. Returning to many of Covran's favorite themes, The New Gods explores humanism's attachment to gods, death, fear, and infinity, in essays that vary in style in form and approach. In "Paleontology" Covran describes a visit to a museum, finding the relatively pedestrian destination rife with decay, death, and human weakness. In another chapter, Covran explores suicide in shorter, impressionistic bursts, while "The Demiurge" is a shallow exploration of man's relationship with good, evil, and God. All the while, The New Gods reaffirms Covran's belief in "lucid despair," and his own signature mixture of pessimism and skepticism in language that never fails to please a reader. Perhaps his prose itself is an argument against Covran's near-shillings: there is beauty in his bleakness.

Principles Written on Religion David Hugh 1988 David Hugh is one of the most provocative philosophers to have written in English. His Dialogue asks if a belief in God is obtained from what is known of the universe, or whether such a belief is even consistent with such knowledge. The Natural History of Religion investigates the origins of belief, and follows its development from polytheism to dogmatic monism. Together, these works constitute the most formidable attack upon religious belief ever mounted by a philosopher. This new edition includes Section XI of The Inquiry Concerning Human Understanding and a letter by Hume in which he discusses Dialogues.

Socrates, Buddha, Confucius, Jesus! Karl Jaspers 1955 "Of all the great minds that have influenced contemporary thought, Socrates, Buddha, Confucius, and Jesus have had the most lasting impact. Other men of great stature may have been equally important for smaller groups," writes Karl Jaspers. "But when it comes to broad, enduring influence over many hundreds of years, these four are so far above all others that they must be singled out if we are to form a clear view of the world's history."...

Farewell to Matters of Principle-Otto Marquard 1989-12-28 This book is the latest addition to the Ötliken series, a multidisciplinary series devoted to original works and translations by European writers in the areas of literature, criticism, philosophy, and politics. An English translation of the German best-seller Abschied vom Prinzipienleben, the book offers a series of essays that present a philosophy of human morality critical of philosophical utopianism. Marquard, widely considered the heir of Gadamer, Habermas, and Bloemhoff, describes his role as “skeptic philosopher” and discusses the 18th-century formation of such themes and disciplines as aesthetics, philosophical anthropology, philosophy of history, the nature of myths and attempts to account for it, and hermeneutics.

But Will the Planet Notice?—Gerard Wagner 2014-09-27 You are one of seven billion people on Earth. Whatever you or I do personally—eat tofu in a Hammur or hamburger in a Prive—the planet doesn’t notice. In our confrontation with climate change, species preservation, and a planet going off the cliff, it is what several billion people do that makes a difference. The solution? It isn’t science, politics, or activism. It’s smarter economics. The hope of mankind, and indeed of every living thing on the planet, is now in the hands of the dismal science. Fortunately, we’ve been there before. Economists helped crack the acid rain problem in the 1980’s (admittedly with a strong assist from a phalanx of lawyers and activists). Economists have helped get lead out of our gas, and they can explain why fossil fuels haven’t disappeared off the coast of New England but taint on in the verge of extinction. More dauntingly, they can take the lessons of the financial crisis and model greater accuracy than anyone else the likelihood of environmental catastrophe, and they can help save us from global warming, if only we let them.
