Faust: The Tensional Network of the Human Body - E-Book - Robert Schleip 2013-02-26 This book is the product of an important collaboration between clinicians of the manual therapies and scientists in several disciplines that grew out of the three recent International Fascia Research Congresses (Boston, Amsterdam, and Vancouver). The book editors, Thomas Findley MD PhD, Robert Schleip PhD, Peter Huizing PhD and Leon Chaitow DO, were major organizers of these congresses and used their extensive experience to select chapters and contributors for this book. This volume therefore brings together contributors from diverse backgrounds who share the desire to bridge the gap between theory and practice in our current knowledge of the fascia and goes beyond the 2007, 2009 and 2012 congresses to define the state-of-the-art, from both the clinical and scientific perspectives. Prepared by over 100 specialists and researchers from throughout the world, Fascia: The Tensional Network of the Human Body provides for all professionals who have an interest in fascia - from scientists involved in basic science research Reflects the increasing need for information about the properties of sensory organ - for example, its important proprioceptive and nociceptive functions which have implications for the generation of low back pain Describes new imaging information available on myofascial force transmission which helps establish a scientific basis for given clinical experiences Explores the importance of fascia as a network of the Human Body will be ideal for all professionals who have an interest in fascia and human movement - physiotherapists, osteopathic physicians, osteopaths, chiropractors, structural integration practitioners, manual therapists, massage therapists, acupuncturists, yoga or Pilates instructors, exercise scientists

The Dynamic Compression Plate DCP - Martin Algower 2012-05-29

Epidemiology of the Rheumatic Diseases - Alan J. Silman 1993 The book is a reference work reviewing in detail currently available data on the epidemiology of the major rheumatic and musculoskeletal diseases. The volume considers the problems of disease definition and criteria, data on the occurrence of these diseases, both prevalence and incidence, and describes their variation with age, sex, geographical area, ethnic group, and trends over time. Also reviewed are results of epidemiological investigations looking at risk factors, both genetic and environmental. The results of family and twin studies are considered together with new data from immunogenetics and molecular biology. The impact of specific diseases on survival is also considered.

Fascial Fitness, Second Edition - Robert Schleip 2021-07-04 A bestseller (over 80,000 copies sold) in a second, updated edition. Lears fascial exercises to improve mobility and flexibility, avoid and treat pain, and improve sports performance. In this second edition of his best-selling guide to fascial fitness, fascia researcher and Roling therapist Dr. Robert Schleip shows you a series of practical exercises that you can easily build into your day-to-day routine. He introduces the most recent scientific findings from the world of fascial research, and explains which methods and equipment are most effective for fascial health (as well as which ones do more harm than good!). These new findings are already changing the shape of physiotherapy and the methods of treatment and recovery we use today, and will continue to do so in the future. Physiotherapists, sports scientists, and doctors agree that if we want to stay flexible, energetic, and pain-free in our day-to-day lives and sporting pursuits, we need to look back to our ‘connective tissue’ - our ‘fascia’. There has been a great deal of research into this over the last few years, all of which shows that the fascia is what our muscles place a huge role in keeping us fit, healthy, flexible, and feeling good. This versatile tissue serves energy to the muscles, communicates with the nervous system, acts as a sensory organ, helps to protect and regenerate our internal organs, and provides the foundations for a healthy physique. We used to think it was our muscles doing all the work, but now we know the connective tissue plays a big part, too. It expands to stress and other stimuli, and when it gets matted or sticks together, it can cause pain and mobility problems. That’s why it’s so important to train our fascia – and just 10 minutes, twice a week is all it takes!

Doing Things for Reassurance - Rudiger Bittiner 2001-07-10 What exactly are the reasons we do things, and how are they related to the resulting actions? Bittiner explores this question and proposes an answer: a reason is a response to that state of affairs. Drastically written, this work is a substantial contribution to the fields of rationality, ethics, and action theory.

Atlas of Anatomy - Sobotta Atlas 2009 Provides a thorough overview of human anatomy and its different structures. The color-coded chapters show them individually, as well as in their physical contexts. The most common diseases and physical dysfunctions are clearly explained, along with their common forms of treatment.

Active Infective Aortic Valve Endocarditis with Infection Extension - Henryk Siniawski 2006-10-11 Active infective endocarditis is one of the most serious diseases of the heart. Infectious often causes periarterial abscesses, and may also spread to affect the mitral valve structures. This assessment of the results of surgical treatment of active infective endocarditis was performed at the German Heart Institute Berlin. It focuses on prospective investigation and proposes a new classification of this endocarditic disease.

Biologie und Epidemiologie der Hormonersatztherapie - Biologie und Epidemiologie von Hormonersatztherapie - M. A. Lewis 2003-06-23 This volume contains an advanced level discussion on the appropriateness of hormone replacement therapy (HRT) in modern postmenopausal women on the basis of evidence provided by recent epidemiological studies. It addresses all aspects of benefits and risks associated with HRT. It focuses, however, on cancer risk and on risk of breast cancer in particular. The book advances further epidemiological studies which incorporate pathological assessments.
