Geopolitics in a Changing World-Klaus Dodds 2000 Developing examples drawn from the last 50 years of world politics, this volume provides a progressive introduction to world politics. It illustrates how forces such as globalisation are changing the traditional subject matter of geopolitics.

Geopolitics:John Rennie Short 2021-08-25 In this cogent introduction to the state of contemporary geopolitics, Short provides an understanding of the basic themes of geopolitics and an overview of geopolitical issues around the globe. His regional approach to the study of the power relations between states is framed by a discussion of critical and popular geopolitical analysis.

Geopolitics and Geoculture-Immanuel Maurice Wallerstein 1991-07-26 Written between 1982 and 1989, this collection contains the author's perspective on the events of this period. The book also charts the development of a challenge to the dominant "geoculture": the cultural framework within which the world-system operates.

Questioning Geopolitics-Georgi M. Derluguian 2000 Redefines globalization as merely the framework of the current political debate on the future of world power.

The Changing World of Energy and the Geopolitical Challenges-Samuele Furfari 2017-04-30 Volume 2 Energy, and its corollary energy geopolitics, is more than ever a grass-roots issue in today's world. After having been threatened for 40 years with the fear of an oil shortage, we have now entered an era of fossil fuel abundance combined with an increase in demand for it. But fears do not dissipate so quickly; sustainable development is now driving energy policy. However, energy geopolitics has its own agenda. To understand its basic tenets one has to grasp the fundamental principles of energy policy. This is the aim of this series of two educational books. The first lays the foundations for an understanding of what energy is; this is essential to grasp the ideas presented in the second volume. As this demonstration goes against the grain of much conventional thinking we start with a first part dedicated to the fundamentals of energy in order to understand what it is, reviewing the essential principles of physics which are based on universal laws that never change. Then we study the basic principles of data analysis, the importance of sustainable development, and review all the various different energy sources, explaining how they are produced, the extent of their reserves, their specific markets, and the main actors. In the second volume a study of the energy geopolitics of different countries and regions ties together all this acquired knowledge and brings it into perspective allowing the reader to undertake an analysis of present-day energy geopolitics. Since the geopolitics of energy is closely linked to its evolution in the past, many references are provided to historical events which put the present situation into perspective. These educational
books are packed with graphs and diagrams to help readers advance progressively in their understanding of energy geopolitics.

**Turkey's Pivot to Eurasia**-Emre Erşen 2019-05-21 This book discusses and analyses the dimensions of Turkey’s strategic rapprochement with the Eurasian states and institutions since the deterioration of Ankara’s relations with its traditional NATO allies. Do these developments signify a major strategic reorientation in Turkish foreign policy? Is Eurasia becoming an alternative geopolitical concept to Europe or the West? Or is this ‘pivot to Eurasia’ an instrument of the current Turkish government to obtain greater diplomatic leverage? Engaging with these key questions, the contributors explore the geographical, political, economic, military and social dynamics that influence this process, while addressing the questions that arise from the difficulties in reconciling Ankara’s strategic priorities with those of other Eurasian countries like Russia, China, Iran and India. Chapters focus on the different aspects of Turkey’s improving bilateral relations with the Eurasian states and institutions and consider the possibility of developing a convincing Eurasian alternative for Turkish foreign policy. The book will be useful for researchers in the fields of politics and IR more broadly, and particularly relevant for scholars and students researching Turkish foreign policy and the geopolitics of Eurasia.

**Geopolitics of the World System**-Saul Bernard Cohen 2003 Cohen argues that the emergence of the United States as the world’s sole superpower and the process of globalization have failed to remove the importance of geography as a political and strategic factor of great import. After laying out the structural basis for his theory of geopolitical theory, he launches into an examination of how geopolitical realities have developed since World War II, a period that witnessed greater change than the preceding two and a half centuries. He then turns his attention to the meat of the book, separate examinations of the each of the major world regions, including examinations of the important countries and their individual geopolitical realities.

**Shaper Nations**-William I. Hitchcock 2016-04-05 Shaper Nations provides perspectives on the national strategies of eight countries that are shaping global politics in the twenty-first century. The volume’s authors offer a unique viewpoint: they live and work primarily in the country about which they write, bringing an insider’s feel for national debates and politics.

**India and Asian Geopolitics**-Shivshankar Menon 2021-04-20 A clear-eyed look at modern India’s role in Asia’s and the broader world One of India’s most distinguished foreign policy thinkers addresses the many questions facing India as it seeks to find its way in the increasingly complex world of Asian geopolitics. A former Indian foreign secretary and national security adviser, Shivshankar Menon traces India’s approach to the shifting regional landscape since its independence in 1947. From its leading role in the “nonaligned” movement during the cold war to its current status as a perceived counterweight to China, India often has been an after-thought for global leaders—until they realize how much they needed it. Examining India’s own policy choices throughout its history, Menon focuses in particular on India’s responses to the rise of China, as well as other regional powers. Menon also looks to the future and analyzes how India’s policies are likely to evolve in response to current and new challenges. As India grows economically and gains new stature across the globe, both its domestic preoccupations and international choices become more significant. India itself will become more affected by what happens in the world around it. Menon makes a powerful geopolitical case for an India increasingly and positively engaged in Asia and the broader world in pursuit of a pluralistic, open, and inclusive world order.

**Reordering The World**-George J Demko 2018-05-15 Using an integrative approach to international relations, the second edition of Reordering the World returns the 'geo' to geopolitical analysis of current global issues. The contributors focus on key emerging world issues, such as spatial data technology, IGOs/NGOs, gender and world politics, boundary disputes, refugee flows, ecological degradation, and UN intervention in civil wars. They also assess the redefinition of international relations by instantaneous, worldwide financial and telecommunication linkages and explore the
struggles of new multinational and nongovernmental organizations to define their roles. Using current real-world examples, this group of eminent geographers challenges the reader to rethink international relations and reorder the world political map.

**Space, Territory, and the State** - Ranabīra Samāddāra 2002
This collection of essays addresses the neglected issues of space, border and statelessness in international politics and contributes a much needed view from the South. Importantly, it asserts that chasms created by borders (including those between India and Pakistan) can be bridged by dialogue, a little analysed tool in international relations.

**Geopolitics at the End of the Twentieth Century** - David Newman 1999

**The Geopolitics of the Global Energy Transition** - Manfred Hafner 2020-01-01
The world is currently undergoing an historic energy transition, driven by increasingly stringent decarbonisation policies and rapid advances in low-carbon technologies. The large-scale shift to low-carbon energy is disrupting the global energy system, impacting whole economies, and changing the political dynamics within and between countries. This open access book, written by leading energy scholars, examines the economic and geopolitical implications of the global energy transition, from both regional and thematic perspectives. The first part of the book addresses the geopolitical implications in the worlds main energy-producing and energy-consuming regions, while the second presents in-depth case studies on selected issues, ranging from the geopolitics of renewable energy, to the mineral foundations of the global energy transformation, to governance issues in connection with the changing global energy order. Given its scope, the book will appeal to researchers in energy, climate change and international relations, as well as to professionals working in the energy industry.

**Geopolitics** - Saul Bernard Cohen 2009
Written by one of the world’s leading political geographers, this fully revised and updated textbook examines the dramatic changes wrought by ideological and economic forces unleashed by the end of the Cold War. Saul Bernard Cohen considers these forces in the context of their human and physical settings and explores their geographical influence on foreign policy and international relations.

**Geopolitics at the End of the Twentieth Century** - Nurit Kliot 2013-11-05
An excellent examination of how the collapse of the Soviet Union and the impact of globalization have brought about changes not only to the territorial configuration sovereignty of states and their boundaries, but also to traditional notions of state, boundaries, sovereignty and social order. These essays focus on the key regional and geopolitical characteristics of this global reordering, with an emphasis on Eastern Europe and South Asia. They discuss the territorial reordering which is taking place at the level of the state as boundaries are redemarcated in line with ethno-territorial demands; as borders are transversed by the movement of peoples, information and finance; and as the lines of territorial demarcation are...
perceived not only in terms of their fixed characteristics but as part of a process through which regional and ethnic identities continue to be formed and reformed. Each section ends with articles which focus on literature on geopolitics and boundaries. This is an invaluable addition to our understanding of contemporary world affairs.

**The Next Decade**-George Friedman 2012 Makes predictions about the imminent challenges that will test America and the world of the near future, forecasting such events as an economic crisis in China and a transition from financial problems to labor shortages.

**Territory Beyond Terra**-Kimberley Peters 2018-03-08 Provides a focus on the planet’s elements, environments, and edges, to extend our understanding of territory to the dynamic, contentious spaces of contemporary politics.

**Civilizations and World Order**-Fred Dallmayr 2014-09-24 Civilizations and World Order: Geopolitics and Cultural Difference examines the role of civilizations in the context of the existing and possible world order(s) from a cross-cultural and inter-disciplinary perspective. Contributions seek to clarify the meaning of such complex and contested notions as “civilization,” “order,” and “world order”; they do so by taking into account political, economic, cultural, and philosophical dimensions of social life. The book deals with its main theme from three angles or vectors: first, the geopolitical or power-political context of civilizations; secondly, the different roles of civilizations or cultures against the backdrop of “post-coloniality” and “Orientalism”; and thirdly, the importance of ideological and regional differences as factors supporting or obstructing world order(s). All in all, the different contributions demonstrate the impact of competing civilizational trajectories on the functioning or malfunctioning of contemporary world order.

**Globalization and Geopolitics in the Middle East**-Anoushiravan Ehteshami 2007-03-14 Examining globalization in the Middle East, this book provides a much needed assessment of the impact of globalization in the ‘greater’ Middle East, including North Africa, in the context of the powerful geopolitical forces at work in shaping the region today. Written by a well-known authority in this area, this book demonstrates that, unlike in other regions, such as East Asia, geopolitics has been a critical factor in driving globalization in the Middle East. The author argues that whereas elsewhere globalisation has opened up the economy, society, culture and attitudes to the environment; in the Middle East it has had the opposite effect, with poor state formation, little interregional trade, foreign and interregional investment, and reassertion of traditional identities. This book explores the impact of globalization on the politics, economies and social environment of the greater Middle East, in the context of the region’s position as the central site of global geopolitical competition at the start of the twenty-first century.

**Environmental Geopolitics**-Shannon O’Lear 2018-03-12 This thought-provoking and clearly argued text provides a critical geopolitical lens for understanding global environment politics. A subfield of political geography, environmental geopolitics examines how environmental themes are used to support geopolitical arguments and physical realities of power and place. Shannon O’Lear considers common, problematic traits of such familiar but widely misunderstood narratives about human-environment relationships. Mainstream themes about human-environment relationships include narratives about presumed connections between human population trends and resource scarcity; ways in which conflict and violence are linked to resource use or environmental degradation; climate security; and the application of science to solve environmental problems. O’Lear questions these narratives, arguing that the role or meaning of the environment is rarely specified, humans’ role in these situations tends to be considered selectively, and little attention is paid to spatial dimensions of human-environment relationships. She shows that how we tend to think about environmental concerns often obscure value judgments and constrain more dynamic approaches to human-environment relationships. Environmental geopolitics demonstrates how we can question familiar assumptions to generate more just and creative approaches to our many relationships with the environment.
Geopolitics for the End Time—Bruno Macaes 2021-09-30 As we approach catastrophe, everything changes. What are the lessons from the pandemic? How well have different cultures and societies responded, and could this become a turning point in the flow of history? Before Covid, a new competition was already arising between alternative geopolitical models—but the context of this clash wasn’t yet clear. What if it takes place on neutral ground? In a state of nature, with few or no political rules, amid quickly evolving chaos? When the greatest threat to national security is no longer other states, but the environment itself, which countries might rise to the top? This book explores how Covid-19 has already transformed the global system, and how it serves as a prelude to a planet afflicted by climate change. Bruno Maçães is one of the first to see the pandemic as the dawn of a new strategic era, heralding a profoundly changed world-political landscape. The New Geopolitics of Natural Gas—Agnia Grigas 2017-04-24 As the United States aggressively expands its exports of liquefied natural gas, it stands poised to become an energy superpower. This unanticipated reality is rewriting the conventional rules of intercontinental gas trade and realigning strategic relations among the United States, the European Union, Russia, China and beyond, as Agnia Grigas shows.

Windfall—Meghan L. O’Sullivan 2017-09-12 Windfall is the boldest profile of the world’s energy resources since Daniel Yergin’s The Quest, asserting that the new energy abundance—due to oil and gas resources once deemed too expensive—is transforming the geo-political order and is boosting American power. “Riveting and comprehensive...a smart, deeply researched primer on the subject.” —The New York Times Book Review As a new administration focuses on driving American energy production, O’Sullivan’s “refreshing and illuminating” (Foreign Policy) Windfall describes how new energy realities have profoundly affected the world of international relations and security. New technologies led to oversupplied oil markets and an emerging natural gas glut. This did more than drive down prices—it changed the structure of markets and altered the way many countries wield power and influence. America’s new energy prowess has global implications. It transforms politics in Russia, Europe, China, and the Middle East. O’Sullivan considers the landscape, offering insights and presenting consequences for each region’s domestic stability as energy abundance upends traditional partnerships, creating opportunities for cooperation. The advantages of this new abundance are greater than its downside for the US: it strengthens American hard and soft power. This is “a powerful argument for how America should capitalise on the ‘New Energy Abundance’” (The Financial Times) and an explanation of how new energy realities create a strategic environment to America’s advantage.

Geopolitics at the End of the Twentieth Century—1999

Geopolitics—Jason Dittmer 2014-06-27 It has been increasingly impossible to think about our changing world without coming across the term 'geopolitics'. In the wake of the invasion and occupation of Iraq by the United States, United Kingdom, and others, geopolitics has been offered as an explanation for the occupation's failure to reinvent the Iraqi state and as a blueprint for future action. But what is 'geopolitics'? Drawing both on academic and political material, this book introduces readers to the concept of geopolitics, from the first usage of the term to its more recent reconceptualisations. The concept of geopolitics is introduced through four thematic sections - Imperial Geopolitics, Cold War Geopolitics, Geopolitics after the Cold War and Reconceptualising Geopolitics. Each section includes key writings from a range of diverse and leading authors such as Said, Agnew, Dalby, O Tuathail, Gregory, Barnett and Kaplan, and is accompanied by a critical introduction by the editors to guide the reader through the material. This Reader establishes the foundations of geopolitics while also introducing readers to the continuing significance of the concept in the 21st century. This Reader provides an essential resource that exposes students to original writing. The Editors provide a pathway through the material with Section Introductions to assist the readers understanding of the context of the material and impacts of the writings. The readings included draw from a range of authors, writing from a range of locations. The Reader concludes...
with the latest changes in geopolitical thought, incorporating feminist and other perspectives.

**Geopolitics, Supply Chains, and International Relations in East Asia**

**Great Power Competition**
Mahir J Ibrahimov 2020-11-23 The world is changing at an ever-increasing pace. Modern communication with worldwide connectivity has brought together a global community. In this environment, we must be globally astute. We must understand the geopolitical and sociocultural aspects of regional affairs in any region in which we may be called upon to serve. Understanding the operating environment and associated regional cultures of our partners and competitors is essential to making military decisions that directly affect outcomes locally, regionally, and globally. Agile leaders must be able to recognize the cultural and geopolitical realities of operations and be prepared to adjust appropriately to achieve our nation’s broader goals. The US Army’s culture, regional expertise, and language programs provide a mechanism to prepare our troops to operate in and among a region’s indigenous cultures. This anthology, Great Power Competition: The Changing Landscape of Global Geopolitics, written under the auspices of the US Army Command and General Staff College’s Cultural and Area Studies Office (CASO), expands on the previous volume, Cultural Perspectives, Geopolitics, & Energy Security of Eurasia: Is the Next Global Conflict Imminent? The first book gained significant positive traction among Army leaders as well as among scholars nationally and internationally. Great Power Competition expands the focus to include Latin America and Africa. Our authors provide insight and observations on the battle for influence in these important regions. As our Army refocuses to prepare for competition in complex future operating environments, the insights offered in this volume are important for all Army leaders. Future missions may vary, but all will include the need to understand the geopolitical and cultural foundations of regions in which we operate and the people we encounter around the globe. All Army leaders should read this book.

**Russia in a Changing World**
Glenn Diesen 2020-04-16 This book explores Russia’s efforts towards both adapting to and shaping a world in transformation. Russia has been largely marginalized in the post-Cold War
era and has struggled to find its place in the world, which means that the chaotic changes in the world present Russia with both threats and opportunities. The rapid shift in the international distribution of power and emergence of a multipolar world disrupts the existing order, although it also enables Russia to diversify its partnerships and restore balance. Adapting to these changes involves restructuring its economy and evolving its foreign policy. The crises in liberalism, environmental degradation, and challenge to state sovereignty undermine political and economic stability while also widening Russia’s room for diplomatic maneuvering. This book analyzes how Russia interprets these developments and its ability to implement the appropriate responses.

**Geopolitics and Geoculture** - Immanuel Wallerstein 1997

**Globalization and Capitalist Geopolitics** - Daniel Woodley 2017-11-27

Globalization and Capitalist Geopolitics is concerned with the nature of corporate power against the backdrop of the decline of the West and the struggle by non-western states to challenge and overcome domination of the rest of the world by the West. This book argues that although the US continues to preside over a quasi-imperial system of power based on global military preponderance and financial statecraft, and remains reluctant to recognize the realities global economic convergence, the age of imperial state hegemony is giving way to a new international order characterized by capitalist sovereignty and competition between regional and transnational concentrations of economic power. This title seeks to interrogate the structure of world order by examining leading approaches to globalization and political economy in international relations and international political economy. Breaking with the classical school, Woodley argues that geopolitics should be understood as a transnational strategic practice employed by powerful state actors, which mirrors predatory corporate rivalry for control over global resources and markets, reproducing the structural conditions for corporate power through the transnational state form of capital. In a period of increasing geopolitical insecurity and economic instability this title provides an authoritative yet accessible commentary on debates on capitalism and globalization in the wake of the financial crisis. It is valuable resource for students and scholars seeking to develop a deeper understanding of the historical determinants of the changing dynamics of neoliberal capitalism and their implications for world order.

**The Next Decade** - George Friedman 2011-01-25

The author of the acclaimed New York Times bestseller The Next 100 Years now focuses his geopolitical forecasting acumen on the next decade and the imminent events and challenges that will test America and the world, specifically addressing the skills that will be required by the decade’s leaders. In the long view, history is seen as a series of events—but the course of those events is determined by individuals and their actions. During the next ten years, individual leaders will face significant transitions for their nations: the United States’ relationships with Iran and Israel will be undergoing changes, China will likely confront a major crisis, and the wars in the Islamic world will subside. Unexpected energy and technology developments will emerge, and labor shortages will begin to matter more than financial crises. Distinguished geopolitical forecaster George Friedman analyzes these events from the perspectives of the men and women leading these global changes, focusing in particular on the American president, who will require extraordinary skills to shepherd the United States through this transitional period. The Next Decade is a provocative and fascinating look at the conflicts and opportunities that lie ahead.

**Eurasia's Shifting Geopolitical Tectonic Plates** - Alexandros Petersen 2017-07-18

This collection features articles, short studies, and interviews by Alexandros Petersen (1984–2014) and constitutes a broad and prescient examination of Eurasian geopolitics. The author analyzes Western relations with the Caucasus and Central Asia, the expansion of Chinese influence, and Russia strategic interests.

**The Geopolitics of Emotion** - Dominique Moisi 2009-05-05

In the first book to investigate the far-reaching emotional impact of globalization, Dominique Moisi shows how the geopolitics of today is characterized by a “clash of emotions.” The West, he argues, is dominated and divided by fear. For
Muslims and Arabs, a culture of humiliation is quickly devolving into a culture of hatred. Asia, on the other hand, has been able to concentrate on building a better future, so it is creating a new culture of hope. Moïsi, a leading authority on international affairs, explains that in order to understand our changing world, we need to confront emotion. And as he makes his case, he deciphers the driving emotions behind our cultural differences, delineating a provocative and important new perspective on globalization.

**Camps Revisited**-Irit Katz 2018-11-23 This book focuses on past and present camp geographies and on the dispositifs that make them an ever-present spatial formation in the management of unwanted populations characterizing many authoritarian regimes as well as many contemporary democracies.

**Handbook on the Changing Geographies of the State**-Sami Moisio 2020-10-30 This authoritative Handbook presents a comprehensive analysis of the spatial transformation of the state; a pivotal process of globalization. It explores the state as an ongoing project that is always changing, illuminating the new spaces of geopolitics that arise from these political, social, cultural, and environmental negotiations.
